Wichtige Änderungen

Neue Funktionalitäten und Erweiterungen

- **PageAssignments**: Assign individual users or whole groups to pages, e.g. as responsible editors. Note: this extension supersedes ResponsibleEditors.
- **Showtime**: an integrated HTML video player for your wiki.

Neue Features

- **Farming**: add metadata like descriptions and tags, disable old wikis, organize wikis in groups. We also added a central search across all farmed wikis.
- **Namespace-specific notifications**: notifications are now much more configurable. Get notified about changes in the wiki on a namespace basis.
- **Disable users**: Instead of user deletion, you can now disable the users while keeping their full record.
- **ReadConfirmation**: Ask for confirmation that an article was read by certain users
- **Bookmaker**: Use the *More* menu to add pages directly to an existing book
- **Support your admin**: certain user groups can now assign users to groups without having to be sysops. It is also possible to allow users access to a selection of administrative tools without having to be sysops.
- **Track usage statistics**: know how often a certain feature is used in your wiki.
- **Improvements of the user experience**: confirmation dialogues are more unobtrusive now.
- **FlexiSkin**: Manage uploaded images.
- **Testsystem mode**: you can now visually indicate when a wiki is a testing system.
- **Late spring-cleaning**: removed/deprecated WantedArticles, FeedbackHelper, WikiCategoryTagCloud, GuidedEditing, and WidgetBar.

Neu gepackte Erweiterungen

- **HitCounter**: Restores the hit count functionality missing in MW core since MW 1.25
- **EditNotify**: Basis for page action notifications

Kompatibilität

- **Finally**: Now fully MW 1.27 compatible!
