

# Release Notes

## BlueSpice 2.23.3

BlueSpice Copyright 2016 by Hallo Welt! GmbH

<http://www.bluespice.com>

<http://www.hallowelt.com>

BlueSpice 2.23.3 is a minor and maintenance release.  
This is a stable release.

### Notable new features

- BlueSpice API: There is now a standardized API for many BlueSpice actions.
- ContextMenu: The extension is now enabled by default.
- Dashboards: There is a wiki page portlet, which allows you to use any wiki page as a dashboard item.
- ExtendedSearch: Introduces facet operators, which indicated whether multiple selections in a facet should be combined using AND or OR logic.
- ExtendedSearch: It is possible to open articles in the autocomplete list in new windows or tabs.
- Flexiskin: It is now possible to disable the background image.
- GroupManager: Raised group name character limit to 255 (was 16).
- InsertMagic: Tag descriptions are now much more descriptive.
- PermissionManager: Add hint flyout for every right.
- Upload: XML and SVG files can now be uploaded by default.
- UserMerge: Added extension to Distribution.
- UserSidebar: There is now a "global actions" navigation tab for every user.
- VisualEditor: Set default style for table to contenttable. This makes nicer tables.

### BlueSpice Foundation

- General: ArticleHelper: Fixed fatal getRedirectTarget call on null
- General: Updated all URLs to bluespice.com and removed "Medienwerkstatt" from company name.

### BlueSpice Extensions

- ArticleInfo: Stop using deprecated Skin::
